

COMPLETE LISTING OF ALL CLAIMS IN THE APPLICATION

~~1.~~-(canceled)

~~2.~~ (currently amended) A process for purification of ethylene oxide by distillation, comprising the step in which

- an aqueous mixture comprising ethylene oxide, formaldehyde and at least 5% by weight of water is introduced via a feed into a distillation apparatus comprising at least one packed column which contains a structured or bulk packing and has a specific mass transfer area A , the mixture being introduced at a height above the bottom of at least x^{\min} , in m, which for a given specific mass transfer area A , in m^2/m^3 , is given by the equation
$$x^{\min} = 5.5 \text{ m} - A \cdot 0.006 \text{ m}^2,$$
- pure ethylene oxide containing 4 ppm or less formaldehyde, is taken off at the top and
- in the bottom phase a mixture is obtained which contains less than 5% by weight of ethylene oxide;

an acetaldehyde enriched fraction is removed as a sidestream from the column at a side take-off located between the top and bottom of the column,

and wherein the aqueous mixture is introduced via the feed at a height of from $1.5x^{\min}$ to $7x^{\min}$.

~~3.~~-(canceled)

~~4.~~ (previously presented) A process as claimed in claim ~~2~~, wherein the specific mass

transfer area A is in the range from $100 \text{ m}^2/\text{m}^3$ to $500 \text{ m}^2/\text{m}^3$.

~~5~~ (canceled) /

~~6~~ (previously presented) A process as claimed in claim ~~2~~, which further comprises a step in which further mixture, comprising water, is additionally introduced via a feed line at a height of at least one theoretical stage or plate above the feed of the aqueous mixture.

~~7~~ (canceled)

~~8~~ (canceled)

~~9~~ (canceled)

~~3~~ ~~10~~ (previously presented) A process as claimed in claim ~~4~~, which further comprises a step in which further mixture, comprising water, is additionally introduced via a feed line at a height of at least one theoretical stage of plate above the feed of the aqueous mixture.

~~11~~ (currently amended) A process for purification of ethylene oxide by distillation, comprising the step in which

- an aqueous mixture comprising ethylene oxide, formaldehyde and at least 5% by weight of water is introduced via a feed into a distillation apparatus comprising at least one packed column which contains a structured or bulk packing and has a specific mass transfer area A, the mixture being introduced at a height above the bottom of at least x^{min} , in m, which, for a given specific mass transfer area A, in m^2/m^3 , is given by the equation

$$x^{\min} = 5.5 \text{ m} - A \cdot 0.006 \text{ m}^2,$$

- pure ethylene oxide containing 4 ppm or less formaldehyde, is taken off at the top and
- in the bottom phase a mixture is obtained which contains less than 5% by weight of ethylene oxide;

an acetaldehyde enriched fraction is removed as a sidestream from the column at a side take-off located between the top and bottom of the column.

and wherein the specific mass transfer area A is in the range from $100 \text{ m}^2/\text{m}^3$ to $400 \text{ m}^2/\text{m}^3$.

12. (previously presented) A process as claimed in claim 11, which further comprises a step in which further mixture, comprising water, is additionally introduced via a feed line at a height of at least one theoretical stage or plate above the feed of the aqueous mixture.
